IDEMIA's IDent 2.0

Law enforcement officers are in constant need to check a person's identity quickly and accurately. Out on patrol, officers can use the IDEMIA IDent 2.0 to easily capture and submit fingerprints for search to one or many criminal databases. The IDent 2.0 is an Android based device that includes an intuitive, easy to use fingerprint capture workflow. Compact, convenient and accurate, IDEMIA IDent 2.0 is an advanced hand-held fingerprint device that enables real-time identification based on IDEMIA's world-class biometric technology.

IDEMIA IDent 2.0 Features and Benefits

FAP 30, FBI-Certified, Single-Finger Scanner

The IDEMIA IDent 2.0 includes an FBI Certified FAP 30 single-fingerprint scanner. IDent 2.0 makes it easy to capture up to 10 fingers. On screen instructions and visual confirmation of fingerprint images make it easy for operators to capture each fingerprint. The FAP 30 sensor ensures captured fingerprints are of the highest quality and provide the greatest likelihood of resulting in an identification.

Touchscreen and Physical Buttons

The IDEMIA IDent 2.0 combines the benefits of a 3.5-inch touch screen display with the proven reliability of physical buttons. Operators can complete all major functions, including the capture workflow, by touching an area of the screen or by pressing a physical button. Touch screen buttons and physical buttons are aligned to make it easy to identify the desired action. Advanced features of the IDent 2.0 device can be accessed through traditional touchscreen actions.

USB and Bluetooth / Mobile Connection

Fingerprints captured by the IDent 2.0 can be transferred to a PC in two different ways. Operators can simply connect the IDent 2.0 device to a Windows PC via a USB cable or the device can be configured to communicate via Bluetooth. When configured for Bluetooth communication, officers can use the device up to 200 feet from their patrol car, dependent upon certain environmental conditions. When configured for USB transmission, operators simply connect the device to a PC via a USB cable and captured fingerprints will be automatically transferred and submitted for search.

Search Results

The IDEMIA IDent 2.0 works in conjunction with IDEMIA's Mobile Connection Windows application. Mobile Connection supports communication between the IDent 2.0 device and the agency that is providing search results. Search details are displayed within Mobile Connection and can be customized to an agency's specifications. Search information including a hit / non-hit indication, mugshot and subject name are transmitted and displayed on the IDent 2.0 device. Results are easily removed through the IDent 2.0's intuitive user interface.

Camera

The IDEMIA IDent 2.0 comes equipped with a rear facing camera that makes it easy for an officer to capture a facial image while capturing a subject's fingerprints. The facial image can be referenced when comparing results within the Mobile Connection application or on the IDent 2.0 device.

No Subscription

IDent 2.0 requires an operator to transmit fingerprint information to the Mobile Connection software via USB or Bluetooth. A reoccurring cellular subscription plan is not required to be able to use the IDent 2.0.
